

PROJECT BRIEF REPORT

Project Name: CloudCollab

Project By: Madhuvanthi S

EXECUTIVE SUMMARY

This report summarizes the activities completed during the first week of the internship project, CloudCollab. The project aims to develop a cloud-based platform that helps remote teams collaborate through project management, task tracking, file sharing, and communication features. During this week, the project requirements were analyzed, objectives and scope were defined, the Software Requirements Specification (SRS) was prepared, and the development environment was set up.

INTRODUCTION

The rise of remote work has created challenges in communication, project management, and file sharing. Teams often depend on multiple disconnected tools, leading to reduced productivity and loss of information. CloudCollab aims to solve these problems by providing a single platform for managing projects, tasks, files, and team communication.

FUNCTIONAL REQUIREMENTS

- User registration and login
- Team and project management
- Task assignment and tracking
- File upload and sharing
- Real-time chat and notifications

NON-FUNCTIONAL REQUIREMENTS

- Security
- Scalability
- Reliability
- Responsive user interface
- Ease of use

TOOLS USED

- ☐ Visual Studio Code
- ☐ Git and GitHub

- ☐ Node.js and npm
- ☐ MongoDB Compass and Postman

TOOLS USED

- Frontend: React.js, Tailwind CSS
- Backend: Node.js, Express.js
- Database: MongoDB
- Cloud: AWS EC2 and AWS S3
- Real-time Communication: Socket.IO

PLANNED TECH STACK

- Week 1: Project setup and requirement analysis
- Week 2-3: Research and system design
- Week 4-6: Core feature development
- Week 7-8: Advanced features and integration
- Week 8-9: Testing, documentation, and final submission
